1 a) First dimension would be empathy. According to the information provided, there was a guest that had (and snoring sound), and this sound wasn't intentionally made by the guest, ^(it is a sound he makes when sleeping.) to trigger the in-room robot. But due to the robot not able to distinguish orders and the sound of the guest made when sleeping. The robot replied asking 'Sorry, I couldn't catch that. Could you repeat your request?' which woke up the guest repeatedly. Therefore, the robots didn't meet 'empathy'.

Second dimension would be reliability. According to the information provided, the robot concierge couldn't provide the guests with information when the enquiries were too complicated. This means for the guests, the robot was not reliable and its reliability is low, guests could not get the answers they want for their enquiries and can not rely on the robots concierge. Therefore, the robots didn't meet 'reliability'.

Third dimension would be responsiveness. According to the information provided, it took the robots at the reception a long time to make copies of the guests' passports when there's no human staff. This means the responsiveness of the robots to respond the guests was very low. And therefore the robots didn't meet 'responsiveness'.

1 b) First solution would be to better the voice recognizer system of the ^{in-room} robot. This solution is for the first case. This can narrow the gap between guest expectation and perception as the guest might expect the robot will perform well and helpful instead of being annoying in the first case. If the system does better, then the guest's expectation and perception will be narrowed. Both of them would be a good experience.

Second solution would be to notify the guest that the robot can't answer enquiries that are too complicated. This is for the third case. This can help narrow the gap between guest expectation and perception as the customer's expectation will not be as high and think that the robot has all the answers to all enquiries. Instead, they should ask the human staff, which still can get them "enquiries solved".

寫於邊界以外的答案，將不予以評閱。

Third solution would be to remind the guest that the robots at reception take a longer time when making copies of guests' passport without the help of human staff. This is for the fourth case. This can help narrow the gap between guest expectation and perception as the customer will understand the robots at reception are not as fast as they expected and have a lower expectation, nearer to the actual experience.

1(c) Robot hotel

寫於邊界以外的答案，將不予以評閱。

1(d) First service would be a discounted price of the room. This "service" would be for guests affected for the first service encounter. As the guests' slogan quality was repeatedly damaged during his stay at the hotel. The hotel shall provide a discounted price of the room to that guest.

寫於邊界以外的答案，將不予以評閱。

Second service would be lounge service. This additional service would be for guests affected for the fourth service encounter. Since they have to wait for a long time for the robots at reception to make copies of their passport. The hotel shall provide them with a free of charge

1(a) In the recent years, the Hong Kong Tourism Board introduced the theme 'Hong Kong Neighbourhoods' to tourists. They are 'Old Town Central', 'Sham Shui Po', 'Island District' and 'Sai Kung'. There are five external factors that can encourage the development of tourism.

(Central will be affected by having more awareness to the protest conferences.)

First of all, it is the political factor. Central was always a place for protests to occur and for the legislation council conference to hold. Due to these reasons, tourists can learn more about protests in Hong Kong and how the legislation conference work in Hong Kong. This will attract travellers from all over the world that want to know more about the above items in Hong Kong. And therefore encourage the development of tourism in Hong Kong.

Secondly, it is the environmental and cultural factor. 'Island District' wasn't like the other urban areas in Hong Kong, it has many natural environment like big lakes, and big forest and ^{many} mountains. These things are not common in other urban areas of Hong Kong.

Tourists might be attracted to the beautiful scenery and decide to visit Hong Kong for this environmental factor. Besides, 'Island District's cultural factor is very interesting. Unlike in urban areas. The local people living in island district has a different side of Hong Kong culture. Unlike the urban areas in Hong Kong which culture is more up-to-date and fast-paced. The culture of island district is very spectacular, about the Hong Kong native's culture mainly, like Hong Kong's traditions and traditional festivals. Therefore encourage the development of tourism in Hong Kong.

Thirdly, it is the economic factor. Central was always considered as the heart of Hong Kong. As most of the important economic activities was done there. There are tourists coming to Hong Kong only to do business affairs about economic activities. Hong Kong is also in a great time zone as during a whole day, both stock markets open, making the Island district will have more tourist due to this factor and the environment might be negatively affected.

stocks traders can monitor the stocks ^{market} with ease. Then these tourists might be attracted to visit Hong Kong. Therefore encourages the development of tourism. Central will be affected and there will be more business tourists or stocks traders due to this factor.

Fourthly, it is the social factor. Sai Kung is one tourist destination and there are many tourists there. Tourists may be attracted by the social ^{factor} and go there to purchase many food and souvenirs. This may affect the 'Hong Kong Neighbourhoods' as many tourists go there to buy food, the food price and the overall prices of supplies. In that area will be increased by the shop owners hoping to make more money from tourists. Then the local people living there will be affected greatly as they may not be able to afford a higher price of daily supplies and for the long run, needing to move.

Fifthly, technological factor. Sham Shui Po is known for its computer markets and many technology stores, like stores for people to buy all kinds of technological gadgets and devices. Tourists may be attracted by the technological factor and want to buy things in sham shui po. This will increase more tourists in the area and encourage the development of tourism in Hong Kong. But this may lead to a problem. If there are more tourists buying tech-related items, the shopowners will know and now want to increase the prices of the items. This will increase the prices of all the tech-related items and in the long term. Maybe the local people can't afford them anymore.

To conclude, the five external factors that can encourage the development of tourism is political, environmental, cultural, economic, social and technological factor.

1(b) In the case, a foreign tourist joined a 'Hong Kong Neighbourhoods' tour group but was not satisfied with the services. There are four possible reasons.

First, in gap 3, the delivery gap. The gap between the service introduced to the tourist and the actual service delivery. The tourist might saw some advertisements online about the 'Hong Kong Neighbourhood' and in the advertisement it mentioned there are free bus service for the tourists, but the actual bus service was very poorly delivered and there is a small fee that you need to pay. This will cause the gap 3 in the tour service.

Secondly, in gap 3, the delivery gap. The tourist might be told by the tour guide that there are 5 different places to go during the tour. But ^{in the} actual case there has only 3. This will cause the gap 3 in the tour service as well.

Thirdly, in gap 4, the communication gap. The gap between what the service providers say and what the customer receives. Maybe the tourist is from America and cannot communicate in Cantonese, only in English. But he/she accidentally chose a cantonese tour without noticing. This may lead to gap 4 in tour service.

Fourthly, in gap 4, the communication gap. Maybe the tourist is from Egypt, he/she doesn't know many English. And so when the tour guide do announcement. That tourist might not know all the information clearly and leads to gap 4 in the tour service as well.

To conclude, there are different reasons regarding gap 3 and 4 in the tour services, the gaps may severely affect the tourist's experience.

3 b) In this day and age, there are more international hotel groups offering online booking services and virtual tours by their official websites and social media outlets, hoping to generate more business. According to the five needs in Maslow's Hierarchy of Needs. There are different example offered by the hotel websites to fulfill the needs of the tourists.

寫於邊界以外的
答案，將不
予評閱。

First of all, physiological needs. It is the most important needs, the thing you need the most to survive. like food. The virtual tour can offer different restaurant in the nearby location, maybe showing their directions in the tour, to guide the tourists where they can have food to eat.

Secondly, safety needs. It is the second-most important needs. It is the need of a safe place / shelter to live in. The virtual tour can show the whole hotel environment and all the emergencies services. So the tourist can feel more safe about the place they live in.

Thirdly, social needs.

Fourthly, esteem needs.

Fifthly, self-actualization.

To conclude, there are 5 different needs for the tourist.
